The invention relates to a human interleukin (IL)-1 alpha propiece polypeptide. The polypeptide has activity in the selective induction of apoptosis in cancer cells. The IL-1 alpha propiece polypeptide or its variants which retain the apoptosis-inducing activity are used in compositions and methods to selectively induce apoptosis in cancer cells, especially manignant cancer cells. The polypeptides form the basis for effective, apoptotic-based chemotherapy where apoptosis-inducing agents
                                                                                                                                                                                                    27-MAY-1998;

Tn5401 is present in B.t. var. morrisoni strain E02158 (NRRL-B-18213). E02158 was transformed with donor plasmid pE0911 and recombinant plasmids were analyzed. 2 Contained a 5 kb insert (given in AAQ85492) including 2 ORFs encoding a resolvase (AAR659825) and a transposase (AAR75354). Tn5401 is used in site-specific recombination to construct improved B.t. strains for biological
                                                                                                                                                                                                                                                                                                                             Disclosure; Page 49-58; 106pp;

                                                                                                                                                                                                                                                                  thuringiensis transposon Tn5401. The transposable element Tn5401 ce encodes 'recombinase/resolvase' and transposase gene products, which cenables a desired gene product (the toxin) to be transferred between bacterial strains. This is used in a method for site-specific recombination system for construction of recombinant B. thuringiensis strains. These strains contain insecticidal toxin protein genes and are free of DNA not native to B. thuringiensis. Insecticidal compositions containing these B. thuringiensis strains are used in insect control methods. The B. thuringiensis strains are used in the compositions produce proteinaceous crystalline inclusions during sporulation, which are highly toxic to specific insects, e.g. Spodoptera and lepidopteran species. The plasmids used enable genes not native to B. thuringiensis to be transferred to strains. Previous genetic transfer of plasmids relied on conjugation, which does not always enable the foreign gene product to be expressed in B. thuringiensis, and plasmids that do transfer, sometimes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-SEP-1996;

This sequence represents a Streptococcus pneumoniae protein of the cinvention. The proteins (or their homologues, derivatives and/or cragments) are useful as immunogens or antigens. Immunogenic or antigenic cc compositions comprising the proteins are useful as vaccines and also in compositions comprising the proteins are useful as vaccines and also in contacting a sample to be tested compositions of S. pneumoniae infection, by contacting a sample to be tested composition or expression of the protein or polypeptide are useful in the function or expression of the protein or polypeptide are useful in compositions in the treatment or prophylaxis of S. pneumoniae infection, as the sequences can be used to treat S. pneumoniae infection, as the sequences can be used to treat S. pneumoniae infection, compositions to the elderly, and in patients with predisposing conditions could be separated by the elderly and kidney disease, diabetes, alcoholism, composition in the content of the protein

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score

"Identification and characterization of an Onchocerca volvulus c
clone encoding a highly immunogenic calponin-like protein.";

MOI. Biochem. Parasitol. 65:135-146(1994).

-!- FUNCTION: COULD BE INVOLVED IN MUSCLE CONTRACTION.

-!- TISSUE SPECIFICITY: FOUND IN THE LONGITUDINAL MUSCLES BELOW.
                                                                                                                                                                                                                                                                                                                                                                                             use by non-profit institutions as long modified and this statement is not removed entities requires a license agreement (See or send an email to license@isb-sib.ch)

Submitted (AUG-1996) to the EMBL/GenBank/DDBJ dehases.
-I-FUNCTION: RECEPTOR FOR THE B. COLI HEAT-STABLE ENTEROTOXIN (E.COLI ENTEROTOXIN MARKEDLY STINULATES THE ACCUMULATION OF CGMP IN MANMALIAN CELLS EXPRESSING GC-C). ALSO ACTIVATED BY THE ENDOGENOUS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PEPTIDE GUANYLIN.

CATALITIC ACTIVITY: GTP = 3,'5'-CYCLIC GMP + PYROPHOSPHATE.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

SIMILARITY: BELONGS TO ADENYLYL CYCLASE CLASS-4/GUANYLYL CYCLASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY: CONTAINS 1 PROTEIN KINASE-LIKE DOMAIN.

RC -!- FUNCTION: PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STEULATES

CC HATURATION & PROLIFERATION BY INDUCING IL-2 RELEASE, B-CELL

CC IL-1 PROTEINS ARE INVOLVED IN THE INFLAMANTORY RESPONSE, BEING

CC IDENTIFIED AS ENDOGROUS PROGENS, AND ARE REPORTED TO STIMULATE

CC THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS

CC (BY SIMILARITY).

CC -!- SUGUNIT: MONOMER (BY SIMILARITY).

CC -!- DOMAIN: THE SIMILARITY AMONG THE IL-1 PRECURSORS SUGGESTS THAT THE

AMINO ENDS OF THESE PROTEINS SERVE SOME AS YET UNDEFINED FUNCTION.

CC -!- MIGGELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SEMENT IN THE

CC PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

11 CATALYTIC ACTIVITY: D-MYO-INOSITOL 1,4-BISPHOSPHATE + H(2)O-THOSITOL A-PHOSPHATE + ORTHOPHOSPHATE.

12 CHARACTER REGULATION: INHIBITED BY LI(+).

13 CHARACTER PHOSPHATIDYL INOSITOL SIGNALING PATHWAY.

14 SUBUNIT: MONOMER.

15 SUBUNIT: MONOMER.

16 MISCELLANEOUS: ACTS ON INOSITOL 3,4-BISPHOSPHATE AND INOSITOL 1,3,4-TRIPHOSPHATE (FORMING INOSITOL 3,4-BISPHOSPHATE) WITH TIMES HIGHER AFFINITY FOR THE BISPHOSPHATE.

17 SIMILARITY: BELONGS TO THE INOSITOL MONOPHOSPHATASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LT 12
